# INTEGRAL SECURITY SYSTEM FOR COUNTRY CLUBS AND PRIVATE NEIGHBORHOODS ALARM EVENTS MONITORING

Our main product is the SoftGuard system, a comprehensive alarm monitoring platform that has application in country clubs and private neighborhoods. The SoftGuard system receives and manages alarm events from fixed targets (residences, administrative offices, sports centers, service dependencies, etc.) and mobile targets (vehicles, motorcycles, ATVs, patrol vehicles for private surveillance, smartphones, etc.).

SoftGuard is installed in a control center that operates 24/7 from where it interacts with different equipments and electronic devices, allowing the attention of alarm events (burglary, panic, medical emergency, access control, video verification, and more) for its validation and subsequent referral to the competent authorities (police, private security services, fire department, medical services, maintenance services, etc.).

## HOUSE

Activation and deactivation of the alarm panel to control the entry and exit of people from each house.

## GUARD

Control and audit of guards' procedure with VigiControl

## FAMILY

Protection for you and your family inside and outside the country club with SmartPanics.

## ELECTRIC FENCE

Administration of the electrified fences for the events reception and map view of the status of every segment: enabling, disabling, on alarm, low battery, panel status open or closed.

## SECURITY VEHICLE

Tracking and monitoring of every security vehicle, with the possibility of assigning them to a fixed or mobile location.

## MAINTENANCE VEHICLE

Tracking and monitoring of every maintenance vehicle.

## CAMERAS IN COMMON SPACES

Video verification of the events sent from any common space inside the country club: sports courts, surveillance sentry, gym, etc.

# BENEFITS FOR THE COUNTRY CLUB AND ITS NEIGHBORS

Push notifications sending to the neighbors to inform about any situation such as: administration, security, social, sports, public services, rules, etc.

Empowering of the neighbors to make them participate actively with their own security and protection

Complete audit of every monitoring task with management reports

Customization of background and logo of the APPs and the SoftGuard Suite.

Incident reports in an easy and fast way with multiple control and management functions.

Optimization for notifications management and alerts received according to the corresponding area.

Form of communication for the neighbors to directly notify any irregularity to the responsible areas.

Escalation of alarm events not attended by operators to the security manager

**Security area:**  
Perimeter transpassing, riots, suspicious activity.

**Maintenance area:**  
Damaged luminaire, fallen tree, gathered garbage, etc.

**Administration area:**  
Expenses payment, administrative management, general inquiries.

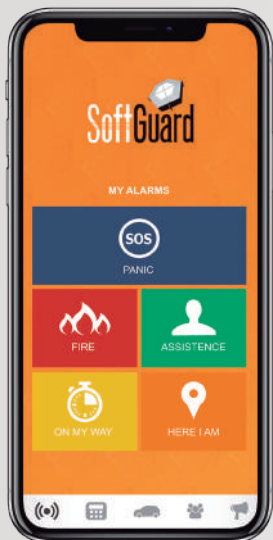

# SmartPanics

## Family protection

### Send alarm events from your smartphone at any time

SmartPanics is a communication platform that allows neighbors to report incidents to the country club in an easy and quick way with multiple control and management functions to grant your family's security.

Every alarm event sent by the neighbors through their smartphones will be received by the monitoring center of the country club via internet or SMS to be attended by the operators immediately. These events are received along with the device's location (GPS) by the inner methods of their smartphone, which will be displayed on the operator's screen. The advanced video setting allows the user to send an image of the emergency from the camera of their smartphone.

Each family may own one or more apps enabled to send alarm events, after being downloaded from the corresponding app stores.

### SmartPanics offers:

- Alerts sending from smartphones (SOS, Fire, Assistance).
- Virtual guard with the "On my way" function, countdown timer activation and immediate sending of the alert to the monitoring center in case of emergency during the route.
- Current location of your family members with "Here I am" button.
- Access to your home's cameras to check what's going on.
- Remote device operation using commands that let you turn devices on and off.
- Family group control using "My group" function. It displays their current location, allows creating inclusion and exclusion geofences, issue alarms history, etc.
- Virtual keypad with 12 commands to report incidents.

iPhone אנדרואיד

# VigiControl

## Guards' control

It is a system for rounds control with online monitoring for guards and security staff. This powerful tool performs the control of the guard's actions: position report validated via GPS, MAN ALIVE alert, report of incidents during the round, sending images from the smartphone. All this and much more received online at the monitoring center 24/7, 365 days a year.

VigiControl is a multi-link application that ensures the alerts sending via TCP-IP, either by WI-FI or by data network connection (GPRS-LTE), as well as SMS sending when the data network is not available.

- Allow guards to send panic alerts to the monitoring center that includes position, data, audio, notes and videos.
- Guards' presence control with "Man alive" button, programmed to send a notification to the guards App every certain amount of time that they must cancel to confirm they are ok.
- Arrival or departure marker to check rounds are completed.
- Online assignment of a location that requires the presence of the guard.
